AdultWebware features descriptions

TABLE OF CONTENTS

BACK-END FEATURES

Advanced Content management

- High volume content support (300 000++ items) & optimized tree view
- Literally unlimited categories and sub-galleries
- Main pictures, main movies, free pictures, free movies predefined categories
- Folders coloring
- One-click accessibility status change
- Changing category/gallery name/date
- Set category as zip downloadable
- Up to 5 descriptions
- Preview thumbnail manual/automatic change
- Category keywords
- Attached gallery
- Assigned models
- Assigned banners group
- Attached stories (combined story+gallery view)
- Global editing mode (Make changes per multiple galleries/categories)
- Set producer's name
- Set gallery price
- Set gallery purchase date (for accounting purposes)
- Trial / Full members accessibility (increase trial -> full conversions)

High volume content support (300 000++ items) & optimized tree view

The tree view is AdultWebware's innovative feature. It is used since version 2.0 to simplify the work with content. To perform content updates is as easy as structurizing them with your MS Explorer and then uploading it via any ftp client to server. After upload is complete, simply click the "update" button ("update index" used in older versions).

We have been continuously improving content tree's algorithms and been working on performance optimization for huge sites usage with high content loads. The simplicity of use is still the same.
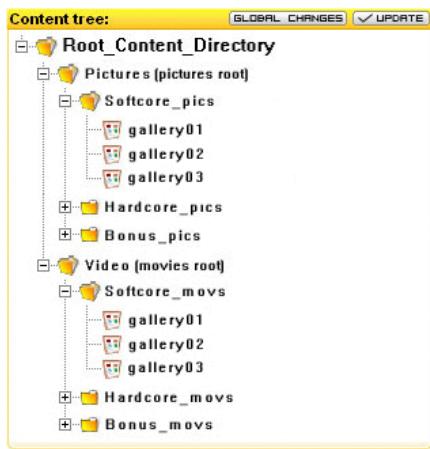

Example content structure:

Even with 300 000++ content items the AdultWebware works as fast as with 5 or 10 thousands. The only delay you might notice could be loading admin panel galleries html in your browser, if you would like to see full list of your thousands galleries at one page.

Clicking the "plus" (expand) button on your gallery tree will point browser's top viewing point to this expanded gallery/category for better browsing.

Fast, simple, powerful content management solution.

Literally unlimited categories and sub-galleries

You can create as many categories and galleries as you want to. There are no limits for your imagination.

The galleries are identified the straight way – if a directory does not have any sub-directories, this directory is taken as a gallery (i.e. which contains content files). Therefore, try not to place any files in middle directories. As well as try not to place any sub-directories to final galleries to exclude any possible mishmash.

Main pictures & movies, free pictures & movies predefined categories

To give your paysite a faster start, general pictures and movies categories are pre-defined for you. As soon as you have uploaded your content, all you need define where is your main pictures folder and where is your main movies folder, and your content will be automatically published to your members.
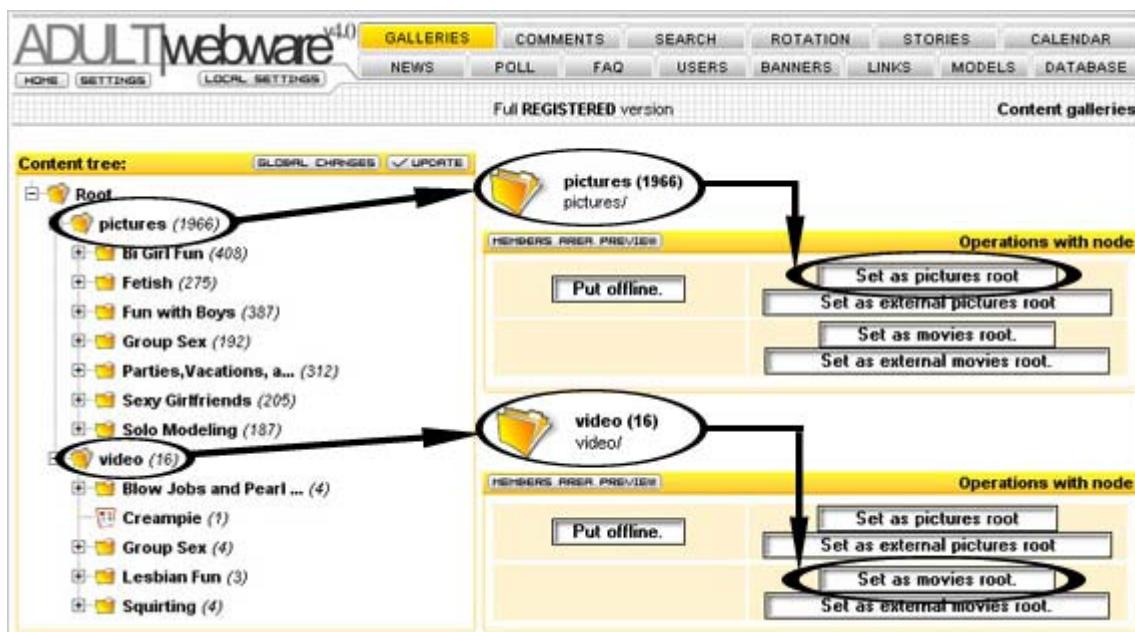

You can also manually define in templates any other categories such as jokes pictures & movies, bonus pictures & movies and any others you may want to.

Folders coloring

To provide you with a better understanding of your current content status, to have a clear view what content is new, what content is available to users and what content is currently offline, the folders coloring is used. Each folder's name color means the following:

1. **Black** (default) – content is available to users
2. **Green** – new content, not yet available to users
3. **Red** – empty category/gallery (i.e. has no files)
4. **Gray** – offline content, not available to users

Green content means that you have recently updated your content and the default date for the newly uploaded content has been set (Local Settings ›› GALLERIES ›› Default date for new galleries). That is helpful if you need to make some work on newly uploaded galleries first, such as thumbnailing, watermarking, descriptions adding, etc.

One-click accessibility status change

To put offline **Black** content (currently available) simply click the gallery name to make it viewable on your galleries screen, and click the "put offline" button. That would change category/gallery status to offline.

Gray content means that you have content rotation turned on, or have manually set the gallery to the offline mode. To manually activate the gallery, click "Go live" button.

That could be useful to make several galleries or whole categories visible/invisible to your members.

Changing category/gallery name/date

To change a category/gallery name is as easy as editing the form in your awpanel ›› galleries. To change a date, simply click on the calendar icon and/or use dropdown menus.

You can also click "copy ID to clipboard" to use the category id for a link in templates.

Set category as zip downloadable

By default, all galleries are zip downloadable. You can change the downloadable status as easy as clicking on the appropriate checkbox. If you need to make multiple changes, the global editing mode would be helpful to you. The button is near the "update" index one.

Up to 5 descriptions

You can have up to 5 descriptions per each set/gallery/category. That is useful if you want to show different descriptions per gallery in free area updates, members area updates, gallery view, content view or for any other means.

Preview thumbnail manual/automatic change

Face (preview) thumbnail will be shown to users in the galleries list, representing each gallery. It could be set automatically on thumbnails creation or manually by clicking the "select thumbnail" button, and clicking a thumbnail in the new opened window.
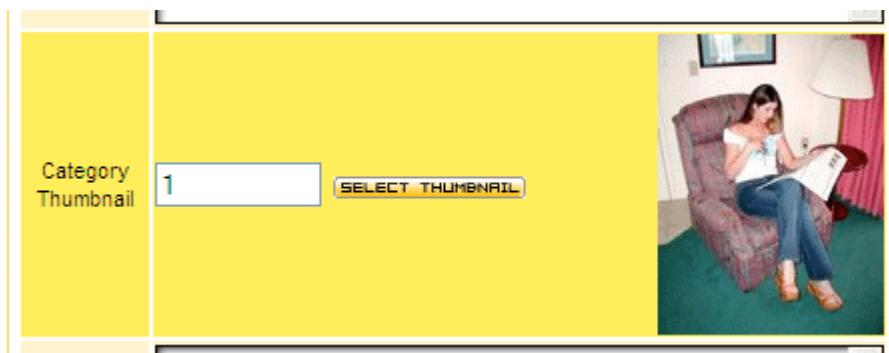

Category keywords

To edit keywords is even easier than editing descriptions. If predefined keywords mode is on, you can simply check the required boxes. Standard free-edit mode:
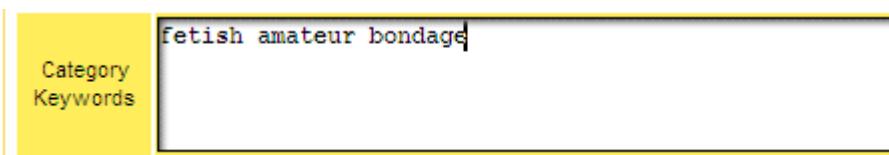

Pre-defined keywords / niche mode

Click "edit keywords" button to enter the keywords editor. Or click the "SEARCH" top menu button to do the same.

Attached gallery

You can attach galleries to each other if their content follows the same idea. For example, link a movie set to pictures set, if the pictures set obviously contains screenshots for the movie. A link to attached gallery is shown in templates (by default).

Assigned models

If you have a models catalogue in your members' area, you should assign galleries to models. These attached galleries will be automatically shown as per each model in the "model's pictures" and "model's movies" areas. Each gallery could be assigned to multiple models.

Assigned banners group

To show targeted banners per each gallery, simply assign proper banners group to each gallery/category, and these assigned banners will be shown in rotation to member while he is browsing a gallery.

Attached stories (combined story+gallery view)

You can show your pictures/movies galleries in a combined view with a story. Thumbnails are shown on the left/right side of the page, the story is shown on the right/left near thumbnails.

That means that your members can read the story AND view pictures/videos clicking on thumbnails. Combine their pleasures for better result.
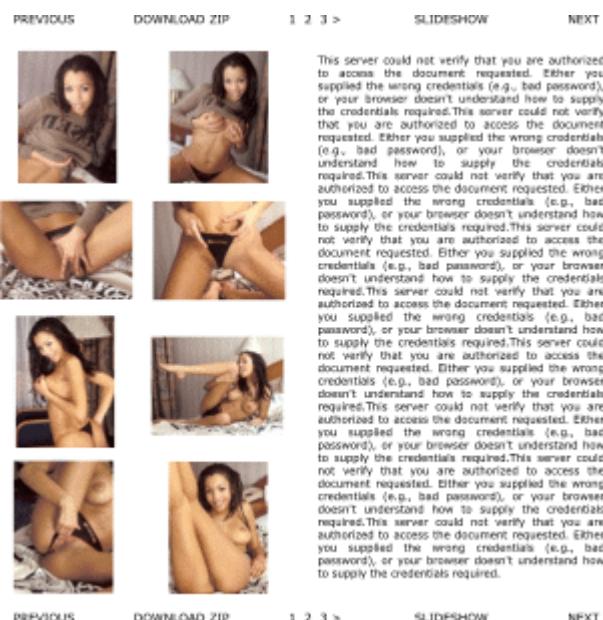

To attach a story, pick one from the list. That story will be shown to members in the gallery view mode, along with the gallery thumbnails.

You can customize the look and feel of combined view in templates.

Global editing mode (Make changes per multiple galleries/categories)

If you need to make global changes, i.e. for several galleries/categories, you might find the global changes mode quite fast & effective. To enter global editing mode, simply click a "global changes" button on the left of the "update" one. Here is how that looks:

Simply select the options you want to be changed, fill in the input fields, select the categories you want to apply your changes to, and click "save changes button".

Clicking a category's name will check/uncheck the subcategories.

Set producer's name, Set gallery price,
Set gallery purchase date (for accounting purposes)

For accounting purposes and to follow the law, you can add producer's name per each gallery for further reference. For accounting purposes, that is useful to have gallery purchase date and price in place, too. So you can count how much a specified category costs to you.

Trial / Full members accessibility (increase trial -> full conversions)

To increase trial conversions, you can set specified content to be shown for trial members only. By default, all content is available for full members only.

Trial members can see all thumbnails, but they can click on them and see full sized content only if it is marked as trial content. Otherwise, a message "You should upgrade your membership to view this set" is shown. Clicking this message will lead a member to the membership upgrade page you may design.

The AdultWebware clients' poll says that this scheme increases trial conversions up to 40% with the correct usage. Just make sure you mark good enough content as trial and a better one keep for full. Nice attractive face thumbnails of such galleries along with advertisement message will make the work done.

Video Content management

- Unlimited video formats support
- Up to 5 descriptions per each video/scene + keywords
- Linkage to a corresponding picture gallery
- Attaching a story, combined video + story view
- Attach models, banners
- Extra download sizes: Default, 256k, 512k, 768k
- Unlimited extra screenshots per each video/scene
- Direct link to video files from the gallery view
- Show video file size in KB, MB, GB accordingly
- Unlimited extensions per video/scene
- Support for preview movie per each video set
- **Enhanced videos**
- The simplest yet powerful way to upload & manage videos
- Unlimited scenes per video/DVD
- Unlimited screenshots per scene/video/DVD
- Cover graphics support for video/DVD
- Unlimited file types per scene/download speed
- Ability to select preview thumbnails per scene/video

Overview

The video support could be divided in two main parts:

- Basic video support
- Enhanced video support

Do not make the "basic video support" words fool you. The "basic" video support is powerful enough to handle video sites of any nature. It supports up to 4 different download speeds, multiple screenshots and a preview clip per movie. You can also attach a pictures gallery to a movie to show user alternative content files of a movie they desire. Basic videos scheme could be used in multiple variations. If you have not very huge heaps of video, and naming files with a specific wildcard is not a problem for you, the basic video support is a way to go.

The enhanced video support is a more convenient and easy way to handle high volume video files. If you are limited in time and well-packed with video content, the enhanced video support would save a bunch for you. All you need is just upload files to directories in a heap and do not think about giving them any special names. At the same time the video content is presented completely dynamically separated by scenes, video extensions, download speeds. Ability to publish multiple screenshots together with videos included. See that yourself in the detailed features descriptions below.

      - Other movie.mpg
      ...
      will be shown to members as separate sub galleries:
      - Unlimited movies.jpg
      - Unlimited movies.avi

Basic videos storage scheme has almost unlimited usage variations. It is good for almost any type of video site. The enhanced video keeps the same structure, based on scenes and download speed directories. With enhanced movies scheme you get the more power and the more ease of use. You get a complete coverage of any PRO's video site requirements with AdultWebware.

Members' area appearance examples:

Unlimited video formats support

You can use as many video formats/extensions as you want to. The list of video formats and extensions could be edited in your main settings menu.

Up to 5 descriptions per each video/scene + keywords

You can use up to 5 descriptions per each video. That could be useful for any situations. For example, if you need to show some special information per video or have separate descriptions for free updates area, members' area preview area, and secured members area and members area updates, etc. You can also feed description fields with html.

If you want to make separate descriptions per each video file/set, place just one video in one directory with a screenshot. Such gallery with just one content item will be published as an ordinary content item (thumbnail). Clicking on it will lead user to view.php (standard content viewing option).

Still, you can have unlimited extensions and up to 3 extra download speeds per this video. Just keep one moviename inside that directory. Description is set the same way as to any other content directory.

Linkage to a corresponding picture gallery

If you have a picture gallery corresponding with your movie (some content producers deliver their video content along with pictures screenshots), you can extend your members' experience letting them browse pictures while the movie is being downloaded.

That could be also useful for episodes-based sites, where an episode contains several screenshots, links to videos and links to corresponding picture set. That is the way most video sites work.

Example layout (video name, main screenshot with a bigger thumbnail, multiple screenshots, attached picture, direct download link, file size, views statistics, rating in stars, description field). See an image below.
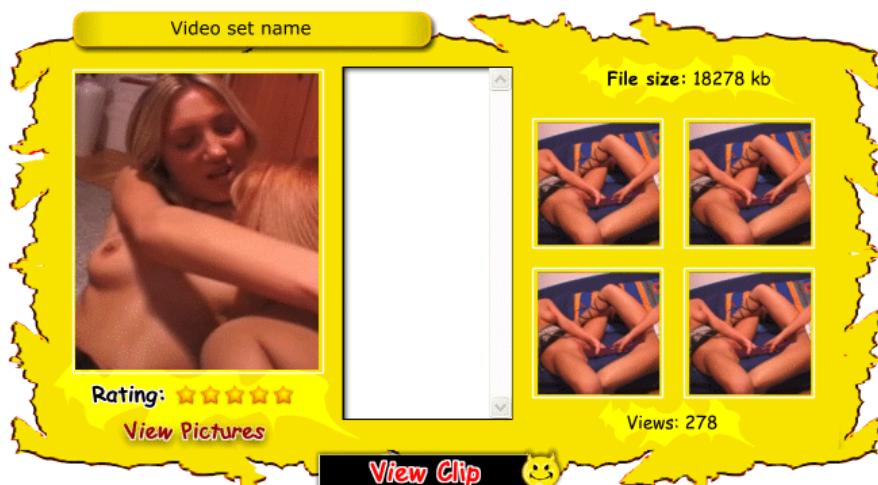

Attaching a story, combined video + story view

You can show your movies galleries in a combined view with a story. Thumbnails are shown on the left/right side of the page, the story is shown on the right/left near thumbnails.

That means that your members can read the story AND view videos clicking on thumbnails. Combine their pleasures for better result.

Attach models, banners

You can attach models per each movie set. That set will be shown in her details in the list of movies she is presented in.

Attached banners group will be shown in rotation while members' enjoyment with the video set. Select targeting by interests.

To attach a model and banner is as easy as selecting them from the list using select box in your admin panel.

Extra download sizes: Default, 256k, 512k, 768k

You can extend the range of available movies by providing a choice of several movie sizes for several download speeds. Members can pick any directly from the gallery view or pick desirable speed while viewing any exact movie. Up to 4 different speed choices are available: "normal quality", "middle", "high" and a "super-high".

For an example, if you have in any given gallery files like "movie_name.avi" and a screenshot "movie_name.jpg", all you need is to create "movie_name_256.avi" ("movie_name_512.avi", ("movie_name_768.avi") and upload it. These files will be caught and a choice to users will be given automatically upon updating the index. ("movie_name.avi" -> "normal", _256 -> "high", _512 -> "middle" and _768 -> "broadband" – you can change the names manually in templates). There's no need to add additional movie screenshot per each suffixed movie.

Unlimited extra screenshots per each video/scene

To make users easier find the movie they want, extra screenshots are supported. You can have as many screenshots as you want per movie. Default screenshot is named with the same name as a movie inside the movie gallery, like moviename.jpg. The extra screenshots will go like screen_1moviename.jpg, screen_2moviename.jpg, screen_3moviename.jpg and so on – as many as you need them. Simply place the prefix and the sequence number before the moviename.

You can change the "screen_" prefix to any other preferred in your settings menu.

Direct link to video files from the gallery view

For a faster access to the movie file, the direct link to video could be presented right at the galleries view page, where the list of thumbnails is published. You may want to show direct links to all video sizes, including extra download speeds.

Show video file size in KB, MB, GB accordingly

Do not puzzle your members with a huge file size like 4312353 bytes/Kbytes anymore. The file size is formatted a user-friendly way in proper values like KB, MB, GB – whatever is nearest (like 1.34 MB instead of 1341231 bytes).

Unlimited extensions per video/scene

Each download size could have unlimited formats/extensions. That means that you can make as wide choice for members to download movie in, as you want/have time to.

That could be shown in templates like this:

Extension	Movie sizes (right click ›› save as.. to download)
WMV	Normal speed :: High speed :: Broadband :: High broadband
MPG	Normal speed :: High speed :: High broadband
ASF	Normal speed :: High speed :: Broadband
MOV	Normal speed :: High speed :: Broadband :: High broadband

And as many more as you need to.

You can also show this list with direct links to videos in the gallery view.

Support for preview movie per each video set

To make members faster understand what the video is about, you can upload a preview clip. A preview clip should be named like that: moviename-preview.wmv. Where the "-preview" is a postfix which could be changed in your Admin Panel ›› Settings.

A link to that preview clip could be presented to members in the gallery view screen per each movie. See templates section for details.

Enhanced videos
The simplest yet powerful way to upload & manage videos

Enhanced videos scheme is an extremely easy way to manage huge loads of video content. In enhanced video mode, each video/DVD set consists of unlimited scenes, unlimited download speeds per each scene, unlimited formats per each speed, unlimited screenshots, and a cover image(s) per the video/DVD set. At the same time, links to content files are presented completely dynamically to members. That gives you a complete freedom and ease of use to publish your videos collections online.

Members area example:

Unlimited scenes per video/DVD

You can have as many scenes per movie set/DVD as you may need. Simply create a "Scene name" subdirectory under your Movie's directory. "Scene name" could be given just any name (without brackets, of course). Find an example below:

```
My content
    Pictures
    Movies
        Movie set 1
            Scene 1
            Scene 2
            Scene 3
            Scene 4
            Scene 5
            ...
            Unlimited scenes
```
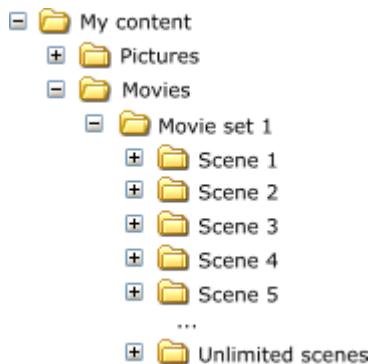

Unlimited screenshots per scene/video/DVD

You can place as many screenshots in your scene directory as you want to. A big difference from the basic video scheme is that there's no need to give such screenshots any special names. Simply upload the pictures as they are. That difference saves you a bunch of time, by the way.

```
» SCREENSHOTS PER MOVIE «          » SCREENSHOTS PER SCENE «
UNLIMITED SCREENSHOTS EXAMPLE        UNLIMITED SCREENSHOTS EXAMPLE

Movie set 1                          Scene 1
    Scene 1                              anyscreenname.jpg
    Scene 2                              anyscreenname2.jpg
    ...                                  ...
    Unlimited scenes                     unlimited-screenshots.jpg
anyscreenname.jpg                    Scene 2
anyscreenname2.jpg                       ...
...                                  Unlimited scenes
unlimited-screenshots.jpg
```
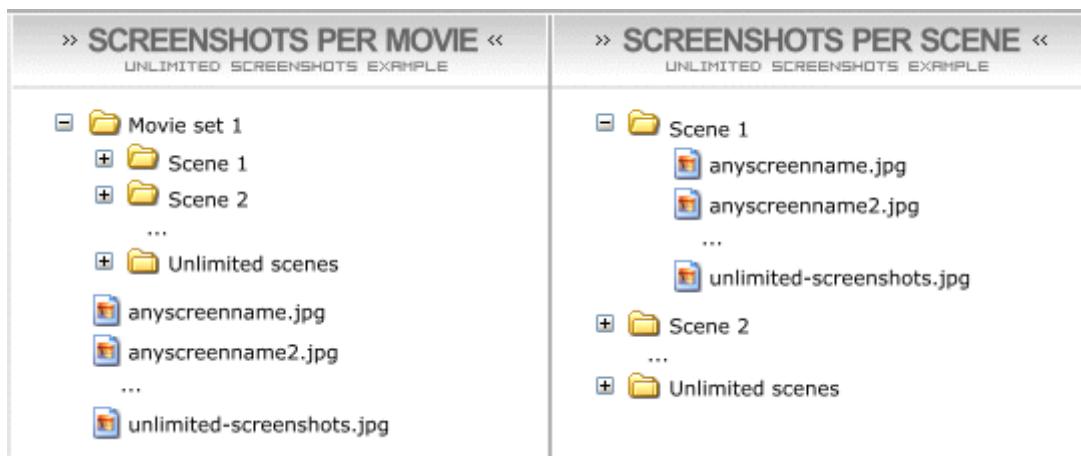

Cover graphics support for video/DVD

Simply place a single cover**.jpg** file inside your Movie/ directory and that image will be thumbnailed & used as the facing thumb for that movie.

Unlimited file types per scene/download speed

Simply create subdirectories under any "Scene" directory and give them any names like "Normal", "Fast", "Very fast" (examples). These would be download speeds presented to users with the same name as it was given to the directory.

These speed directories are the actual storages for your video content files. Simply upload them there one-by one. These files could have any names and could be with any extensions.

In this example 01-02-etc with leading zero are links to the movie files in appropriate speed directories. All files are sorted by extensions automatically. Just keep in mind when uploading files, these parts 1-2-3 will be shown in alphabetical order. I.e. like this:

File name	#
Anyname.wmv	01
Anyothername.wmv	02
Asmanyasrequired.wmv	03
Movie1.wmv	04
Movie12.wmv	05
etc	etc

Ability to select preview thumbnails per scene

You can also pick desired preview thumbnails per each scene. To do so, simply click the select thumbnail button from your awpanel ›› galleries:
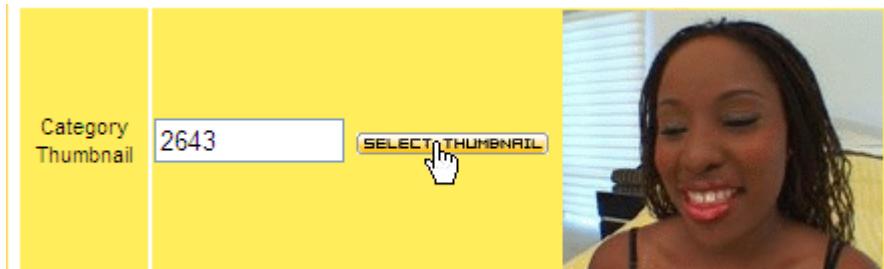

Then in the new window select the scene and select thumbnails you want to be shown using checkboxes. Selected thumbnails will be shown on top of the page.
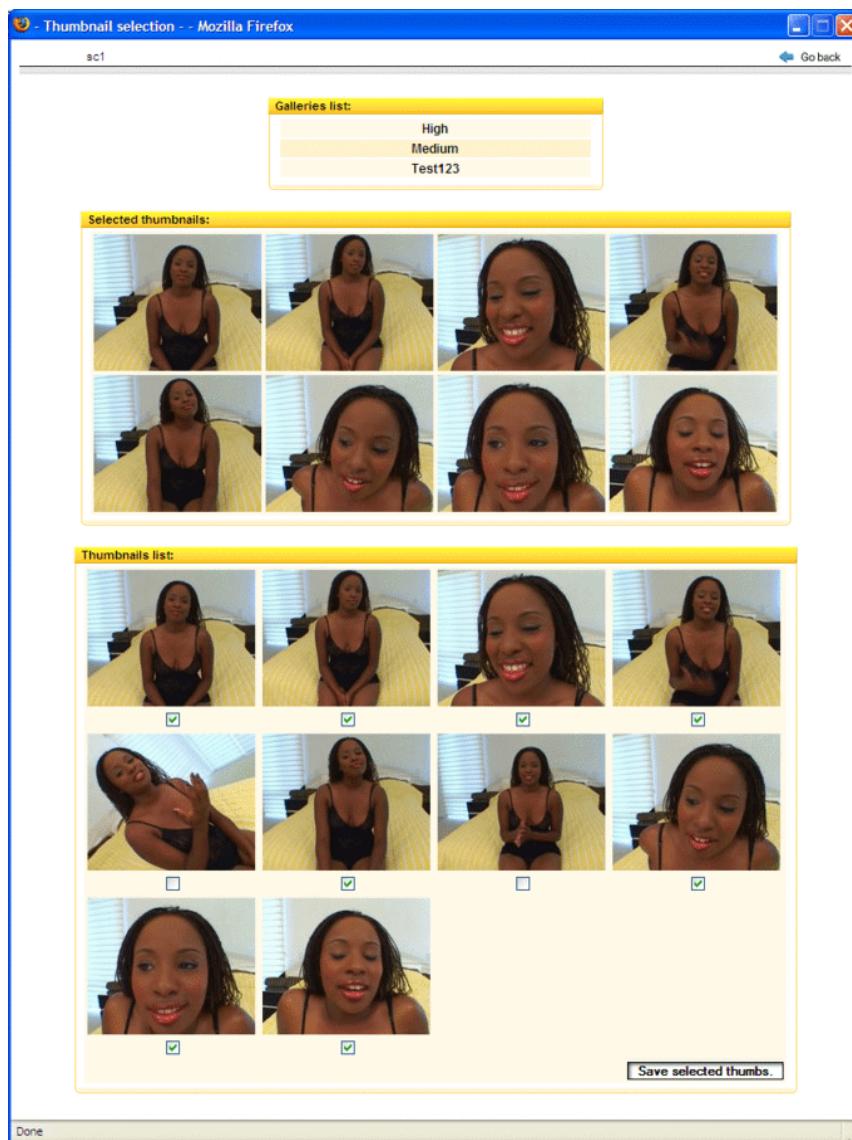

Thumbnailing, watermarking, content resizing

- GD & ImageMagik support
- Ease of use and real-time statistics with error reporting
- Unlimited sizes for standard (default) thumbnails
- Unlimited sizes for additional thumbnails
- Proportional zooming or centered/default image cropping
- Create additional image content sizes (for dialup users, and more)
- Thumbnail all content, main items or screenshots only
- Thumbnail specified category only
- Overwrite existing thumbnails
- Delete existing thumbnails of specified sizes
- Apply special effects
- Special effects adjustment via advanced settings editor
- Jpeg quality control
- **Watermarking** with enhanced transparency support
- Changeable X / Y position of the watermark image
- Overwrite already stamped content items
- Restore original content from the backup instantly
- Backup original content during watermarking

GD & ImageMagik support

You can have any of the following free components installed on your server to start using image processing features:

- GD version 2.xx
- ImageMagik (any version)

To have ImageMagik enabled, simply enter your AWpanel ›› Settings ›› Main and type in "Path to ImageMagik's «convert»" the correct path to your ImageMagik's binaries, like this:

Path to ImageMagic`s «convert»	/usr/bin/

If you do not have the above components installed or unsure about what it is, please contact AdultWebware support team. Our professional system administrators will get these components installed for you (yes, for free). ImageMagik is recommended for better quality and much faster performance than GD.

Ease of use and real-time statistics with error reporting

To create thumbnails all you need is to enter Admin Panel ›› Galleries section and select a specific category where you want thumbnails to be created at (main category – all content is selected by default). For all subcategories beginning with the selected one, thumbnails will be created as well. If you want to create thumbnails for all existent categories ›› go back at the beginning (click the top main/root tree option) and then click "create thumbnails" button.
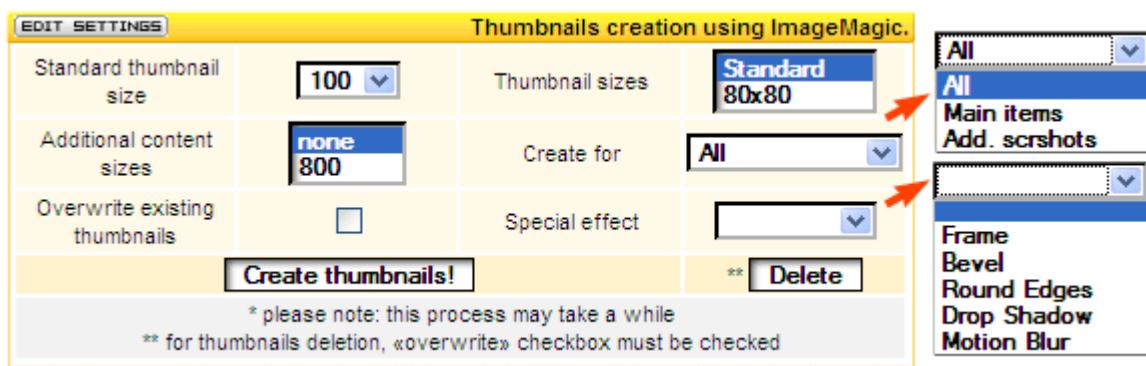

Thumbnails are created with a "thumb_" prefix added to each image name. Prefix could be changed in your Admin Panel ›› Settings ›› Thumbnails as well as many other options.

The real-time statistics on current thumbnails creation will be shown on the left column, under the tree window ("Current statistics" box, subsection "Creating thumbnails results"). The best known record is 200 thumbs per minute (with ImageMagik).
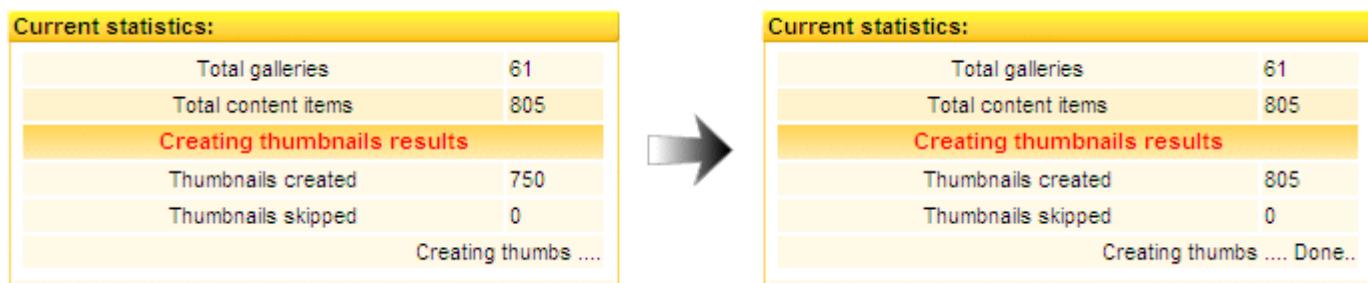

"Thumbnails created" shows amount of successfully created thumbnails. "Thumbnails skipped" shows thumbnails which were skipped due to their existence, or due to errors. The errors messages will be shown in the popup window on thumbnails creation completion. All errors are logged in the awpanel/awpanel_error.log textual file.

Thumbnails sizes and all other thumbnails-related settings could be changed in Admin Panel ›› Settings ›› Thumbnails. To go there you can simply click an "edit settings" button in the thumbnails creation window's title.

Unlimited sizes for standard (default) thumbnails

Standard (default) thumbnails are the ones used by default in the awpanel face thumbnails select, shown in the members area updates and content sections. These thumbnails should be created first right after the content is uploaded.

You can have standard thumbnails created in unlimited sizes. For example, if you want your movies thumbnails to be twice as bigger as your standard pictures thumbnails. Simply go to your settings ›› Thumbnails and fill the "Standard thumbnails sizes" field.

You can specify as many additional thumbnail sizes as you want to separated with a ";" symbol. For example, "180;90x90x1;50;200x150"

Where 180 – is proportional zooming to the 180 pixels biggest side, 90x90x1 – centered cropping, 200x150 – default image cropping.

Unlimited sizes for additional thumbnails

Additional thumbnails could be used anywhere else for any advanced tasks. For example, to show first page updates only with a bigger thumbs, main screenshot for videos, fit specific design layout or for any other way of use you may need. In templates, simply add the following modifier: |thumb:"220x150x1", where 220x150x1 is an additional thumbnail size.

As well as for the standard thumbnails, you can specify as many additional thumbnail sizes as you want to separated with a ";" symbol. For example, "180;90x90x1;50;200x150"

Where 180 – is proportional zooming to the 180 pixels biggest side, 90x90x1 – centered cropping, 200x150 – default image cropping.

Proportional zooming or centered/default image cropping

Thumbnails sizes and all other thumbnails-related settings could be changed in Admin Panel ›› Settings ›› Thumbnails.

You may specify thumbnail size with just one digit, for example like that: 90. In that case if image is vertically-oriented, it will have a thumbnail with height=90, and with proportionally calculated width. If image is horizontally-oriented, it will have a thumbnail with width=90 and with proportionally calculated height (i.e. 90 digit represent max (width, height) thumbnail value).

If you need to have thumbnails created exactly in specified width/height (for example, to suite a specific design layout), you should use a "x" separator between width and height. For example: 90x90. In that case vertical-oriented picture will be sharpened at the bottom, with horizontal orientation – sharpened at the right. You can specify a centering option if you want thumbnails to be sharpened centrally. To make so, you should use syntax like this: 90x90x1.

Create additional image content sizes (for dialup users, and more)

You can create additional content sizes for dialup users and to extend the amount of content shown to members. That is recommended to use proportional zooming instead cropping for better results. The most commonly used sizes are 600, 800, 1024 – to fit the most common desktop modes.

To change additional content sizes you should go to the Settings ›› Galleries and fill in the "Additional content sizes" field, like this:

Then simply pick the required size or several sizes to be created:
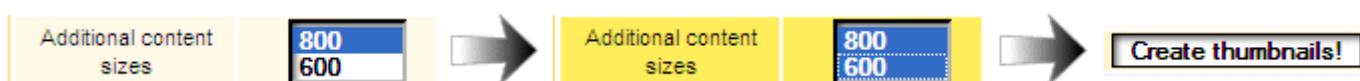

Thumbnail all content, main items or screenshots only

You can select "Create for" between "Main items" (main video screenshots + main content items only), "All" (for all graphical files), "Add. scrshots" (for additional screenshots only). You can also pick desirable special effect.
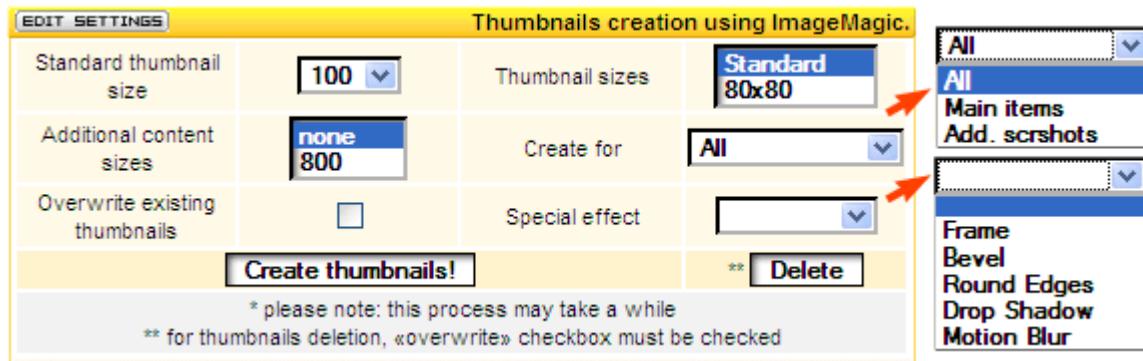

Thumbnail specified category only

If you need to create thumbnails for a specified category only, simply click on any from the tree and then click "create thumbnails" button. Thumbnails will be created inside that category only (including all subcategories and subgalleries).

Overwrite existing thumbnails

By default, already created thumbnails are skipped. That is very handy if you often upload new content and want to create thumbnails for the newly uploaded content only, without selecting its category first. However, if you need them been overwritten, check the "overwrite existing thumbnails" box and hit "Create thumbnails button".

# Delete existing thumbnails of specified sizes

No need to go through ftp and delete unnecessary thumbnails one-by-one from one folder to another. Simply select "Standard thumbnail size", pick "Thumbnail sizes" (standard only by default), and/or "Additional content sizes" (yes, these all could be processed all together), then check the "Overwrite existing thumbnails" box (to make sure you haven't deleted thumbnails by occasion) and then click "Delete" button.

You will see the deleted thumbnails status in the real-time, as usual.

Current statistics:	
Total galleries	61
Total content items	805
Thubmnails deleting results	
Thumbnails deleted	805
	Deleting thumbs .... Done..

Apply special effects

You can choose any preferred thumbnails effect from the list of available ones:

Frame
Bevel
Round Edges
Drop Shadow
Motion Blur

No effect   Bevel   Round edges   Frame   Drop shadow   Motion Blur
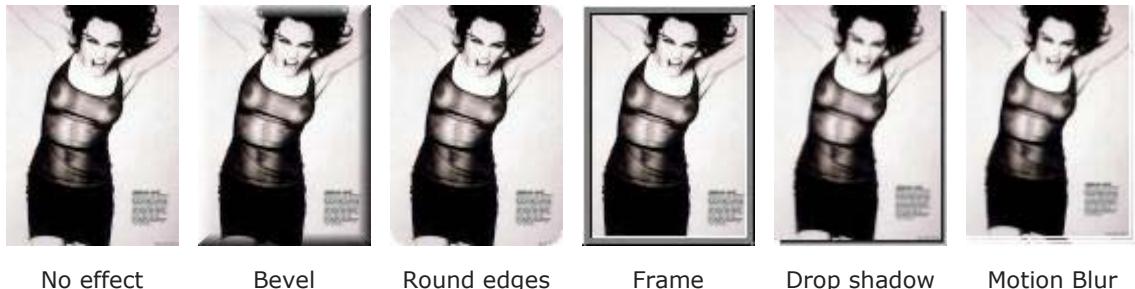

Special effects adjustment via advanced settings editor

Adjust all thumbnails special effects settings such as background colors, round edges radius, shadow color, background color for drop shadow effect, background color for motion blur effect and many more in your AWpanel ›› Settings ›› Thumbnails.

Jpeg thumbnails quality (1..100)	85	?	DEFAULT
Bevel width for Bevel effect	8	?	DEFAULT
Bevel light color for Bevel effect	FFFFFF	?	DEFAULT
Bevel dark color for Bevel effect	000000	?	DEFAULT

Save changes

Jpeg quality control

Set up the required jpeg quality to make thumbnails the quality & size you need. That is as easy as editing the co-named field "Jpeg thumbnails quality (1…100)":

Jpeg thumbnails quality (1..100)	85

That is situated here: AWpanel ›› Settings ›› Thumbnails.

Watermarking with enhanced transparency support

With enhanced watermarking ability which is built in AdultWebware you can forget about Photoshop. Simply upload all your content and prepare the logo/text in transparent PNG format. Click just one button and relax. Everything else will be done automatically!

Watermark adding using ImageMagic.

Stamp file		Browse...
X Position	Left	Y Position	Top
Make backup	☐	Overwrite if alredy stamped	☐

Stamp!   Restore backup!

Advice: add watermarks only when thumbnails are created already

*please note: this process may take a while
** for backup restoring, overwrite checkbox must be toggled on

Watermark example with jpeg quality set at 75:

As you can see, shades and special effects are placed very well!

Changeable X / Y position of the watermark image

Yes, you can change the position of your logo to be watermarked.

Example watermarks placement is shown on this scheme:
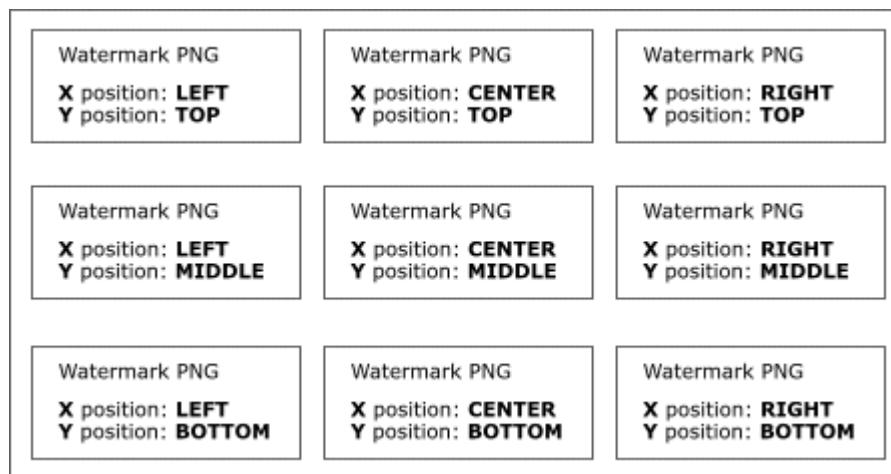

Overwrite already stamped content items
Restore original content instantly
Backup original content during watermarking

To make your experiments with watermarking more secure, we have added the backup/restore features for you. That would help you restore the original content if you do not like the stamps made for any reason. The backup files will be stored with .bak extension on your server's hard drive.

You can overwrite already stamped content items, backup/restore original content with just one button click. To restore backup make sure you have checked the "Overwrite if already stamped" box first, then click "Restore backup!" button. The statistics will be shown on the left side.

Managing scheduled updates

- Scheduling gallery / category for update
- Default date for new content uploads
- Show upcoming updates calendar in the members area
- Schedule upcoming updates + news via monthly calendar
- View monthly calendar in a full screen window

Scheduling gallery / category for update

To schedule gallery/category is as easy as set the date for it. That category/gallery will be available to users as soon as the specified date arrives. Here is how that looks:
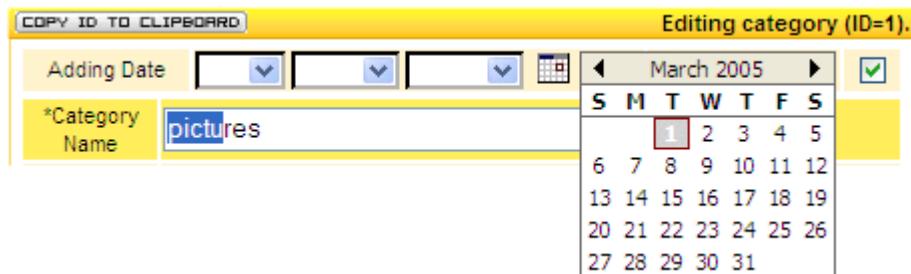

Default date for new content uploads

You can also set up the default date for all your new content uploads. I.e. when you upload new content and click update index, new galleries and categories will be set to the date specified. That would help you organize new content, create thumbnails, specify descriptions and keywords while it is hidden to users. To set the default date for new galleries, go to AWpanel ›› Local settings ›› Galleries:

Show upcoming updates calendar in the members area

You can publish upcoming updates calendar to your members. You can pick any way you want it to be shown, with weekdays, dates, etc. Each day will contain thumbnail for an update, gallery name, description, file sizes and more. You can show all the other information as well using javascript rollover code to keep it compact.

It is recommended to show upcoming updates for no more than 7 days in advance to keep members inside the members area and not letting them to leave for a month and come back later to check the updates.

Example upcoming updates calendar:

You can define how many updates to show per day in templates.

Schedule upcoming updates + news via monthly calendar

Schedule your updates the easiest way. Add galleries and news to any day using one big simple calendar. Click "+gal" button to add a gallery from the new window. Click "+news" to add news. Scheduled galleries shown by their names.

All is plain and simple.

View monthly calendar in a full screen window

If you want to view calendar full-screen for easier management, go to AWpanel ›› Settings ›› Main and check the "Open calendar in a new full screen window" box. If this box is checked, clicking "CALENDAR" top menu option will open calendar in the new full screen window.

Automating updates (content rotation)

- Fake rotation (announcements)
- Real rotation
- Real stack rotation (specified content always visible)
- Per-user rotation (individual updates per each user)
- Customized settings for pictures / movies
- Separate rotation for free/protected areas
- Current rotation status
- New settings *instant* activation

Content rotation could be set separately for members area pictures/movies and free area pictures movie at once. You can see current content rotation settings on the top right golden box. Content rotation settings you specify are set instantly and will start working on the next day as soon as any user logs inside your members area.
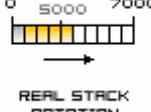

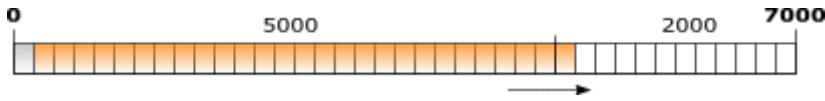

|	
CALENDAR UPDATES	**Scheduled updates** -- the default content rotation method. Actually that is just a schedule for whole content galleries to be shown to users on a specified date. As soon as all content becomes available, the system will just "fall asleep" until you make changes to the schedule by adding some new content. Algorithm works this way: each gallery, each category with subgalleries has its own "appearance date". If this date is older than current date, the gallery is not shown to users until the specified date comes. When new content is added in the schedule mode, all new content galleries get the date which has not arrived yet (+4 years by default). That's why the new content you upload is not available to users until you make needed changes to the schedule. In the Admin Panel ›› Galleries all currently inactive galleries are light-gray colored.

	This easiest algorithm may suite the needs of highly skilled and professional webmasters who knows exactly what they want to do with their content and who are willing to do that manually. In this mode, upcoming updates calendar is available in the members and tours areas.
NOTE! FAKE ROTATION (ANNOUNCEMENTS)	**Fake** content **rotation**. Random gallery is shown in the updates area as an update announcement with no actual gallery availability status change. Could be useful for small paysites, to keep members tuned.
REAL ROTATION	**Real** content **rotation**. Specified amount of content is available to users on rotation start up. The other part is hidden to members. Each specified xxx days specified yyy amount of (random) galleries are added to members. As soon as all content becomes available, the system becomes idle until new content is uploaded.
0 5000 7000 REAL STACK ROTATION	**Real stack rotation**, or «perpetual motion machine» -- the most effective and the most popular content rotation algorithm. This algorithm completely automates your members area updates so you can literally forget about it for quite a while. All you need is to have at least 3000 content items (approx 70+ galleries – recommended minimum). May be successfully used at paysites of any size. You should specify an amount of content to be always available to users at any given time. Here is a quick example. Let's assume that our mega-paysite has about 7000 pictures galleries and 2000 movies galleries. Let us decide that 5000 pictures galleries (70%) should be always available to users (in "stack"). The other 2000 will represent a "dynamic reserve" to take updates from. For movies, we'll keep 80% always available (1600 gals) and 10% in stack updates (400 gals). Say, we want to make daily updates. 20 photo and 4 video updates daily. That would give us 2000/20=100 days of FRESH daily updates for pictures and 400/4=100 days of FRESH daily movies updates. Here is a scheme of how that works: On the beginning of each new day, «stack is moving» at a specified amount of content. In our case these are 20 photos and 4 videos taken from the "reserve" randomly, and added to the "top" of the stack (shown in updates section). The same amount is "taken out" from the end of the stack. This will keep the same amount of content available to users and will be endlessly rotated.

Per-user content **rotation** is the most sophisticated content rotation algorithm. Actually this is a real rotation with individual updates per each member (user). Imagine that each member will have personal pictures and movies updates. At the moment new users logs inside the members area, he can view specified amount of pictures and movies (you define the %). The more this member visits the member's area, the more content he can see. If a member does not visit his members area, no updates are added to him until he logs in again.

On rotation set up you should pick starting content levels in percents for pictures and movies for all new members. As well as define how many picture/movie galleries add to updates to them and how often.

After clicking "turn it on!" button, your htaccess+htapasswd files will be scanned to collect the complete list of your current members' information. All of them will still have access to all content which was available at the time of clicking that button. You will see a real-time progress bar which indicates current operation, username, completion percentage, and the other statistics.

As soon as fetching is completed, your users area is updated as well with all your current htaccess+htpasswd information.

After uploading new content, it will be automatically queued for updates per each member, according to their current personal settings.

If you change a date on any gallery with per-user rotation turned on, that date will be changed to all users.

Perfect solution for sites based on exclusive content in specific niches. That automatically

All content rotation updates are shown on the free area updates history as well, unless the per-user content rotation is on. With scheduled updates, upcoming updates calendar shows upcoming updates which were planned for the future.

A screenshot could be found on the next page.

Online/offline status, trial members, language, new messages

You can know all you might need to know from the users list. You can also see users who are currently online:

User	Status	First/Last Vizit	Views	Trial	Language	Messages (to/from us)	New
nazztave	OFFLINE	27-Dec-04 / 26-Feb-05 (2 month(s) 1 day(s))	27827		Italian(Standard)	OPEN MESSENGER 0 / 1	0
johnschn	ONLINE	23-Dec-04 / 05-Mar-05 (2 month(s) 12 day(s))	25260		English(United States)	OPEN MESSENGER 0 / 1	0
rosco820	OFFLINE	11-Dec-04 / 05-Mar-05 (2 month(s) 24 day(s))	24593		English(United States)	OPEN MESSENGER 2 / 3	0

So you can open a messenger and sent them a greeting message instantly.

Sort by any user field

Simply click on any header (User, Status, First / Last visit, Views, Trial, Languages, New messages) to make the list sorted by that field. That is useful if you need to see only users with new messages, for example:

User	Status	First/Last Vizit	Views	Trial	Language	Messages (to/from us)	New
semgreen	OFFLINE	04-Mar-05 / 05-Mar-05 ()	5		English(United States)	OPEN MESSENGER 1 / 1	1
igotz2wiz	OFFLINE	27-Feb-05 / 05-Mar-05 (5 day(s))	80		English(United States)	OPEN MESSENGER 2 / 2	1

Search users by name

To search users by name is as simple as typing full name or a part of it into the search box and hitting the "Search by name" button:

User	Status	First/Last Vizit	Views	Trial	Language	Messages (to/from us)	New
anthbell	OFFLINE	05-Feb-05 / 02-Mar-05 (24 day(s))	1005		English(United States)	OPEN MESSENGER 0 / 1	0
panther03	OFFLINE	02-Dec-04 / 30-Jan-05 (1 month(s) 27 day(s))	438		English(United States)	OPEN MESSENGER 0 / 1	0
emilanth	OFFLINE	22-Dec-04 / 03-Mar-05 (2 month(s) 11 day(s))	74		English(United States)	OPEN MESSENGER 0 / 1	0
BsPanther	OFFLINE	20-Feb-05 / 20-Feb-05 (0 day(s))	39		English(United States)	OPEN MESSENGER 0 / 1	0

Edit users passwords, change trial/full membership status

To edit users, you should enter the editing mode first by clicking the "edit mode" button. If you have clicked "edit" after doing your search, the edit mode will be activated for the current search results:

User	Status	First/Last Vizit	Views	Trial	Language	Password	Action	Del
anthbell	OFFLINE	05-Feb-05 / 02-Mar-05 (24 day(s))	1005	☐	English(United States)		Change	✖
panther03	OFFLINE	02-Dec-04 / 30-Jan-05 (1 month(s) 27 day(s))	438	☐	English(United States)		Add	✖
emilanth	OFFLINE	22-Dec-04 / 03-Mar-05 (2 month(s) 11 day(s))	74	☑	English(United States)		Change	✖
BsPanther	OFFLINE	20-Feb-05 / 20-Feb-05 (0 day(s))	39	☐	English(United States)		Change	✖

However, you can define a new search, or sort users by clicking one of the top fields. To change password simply type it into the "Password" input box and hit "Change" button to get it saved.

You can add inactive members (which were listed before, but are not presented in your htpasswd file at the moment, these could be users with an expired membership) by specifying a new password to them and hitting "Add" button.

You can also change their trial status by clicking the appropriate checkbox.

Htpasswd: add new members/delete old ones instantly

To enter htpasswd mode, click ".htpasswd" button. In this mode you can view and search only users which are stored in your .htpasswd file.

Here you can add new members as well:

Add user to .htpasswd:

Login	
Password	

Add user!

Make changes for multiple users

You can edit multiple input items and then hit the global "change button":

User	Status	First/Last Vizit	Views	Trial	Language	Password	Action	Del
anthbell	OFFLINE	05-Feb-05 / 02-Mar-05 (24 day(s))	1005	☐	English(United States)	pass1	Change	✖
panther03	OFFLINE	02-Dec-04 / 30-Jan-05 (1 month(s) 27 day(s))	438	☐	English(United States)		Add	✖
emilanth	OFFLINE	22-Dec-04 / 03-Mar-05 (2 month(s) 11 day(s))	74	☑	English(United States)	newpazz	Change	✖
BsPanther	OFFLINE	20-Feb-05 / 20-Feb-05 (0 day(s))	39	☐	English(United States)		Change	✖
Set automatic expiration for inactive users

Users which were inactive for a specified period of time (days) will be removed from your users list automatically. You can set this date up in your local settings > users menu:

Users inactivity time (days)	200

Delete users upon their cancellation

You can automatically delete cancelled user if you can send him to this page upon his cancellation: index.php?cancel=1

Just set up your billing to send members to that page upon cancellation.

Instant messenger

- View unread messages list on the admin panel first page
- Make default welcome message for all new members
- New messages in a new window / show banner or text "you've got a message" to users
- Send broadcast messages to all users

View unread messages list on the admin panel first page

You can view unread messages list on the admin panel first page. Modules buttons are shown by default. To view unread messages go to your admin panel ›› settings ›› main:

Show first page unread messages ☑

Click "save changes" button and the first page will show unread messages there:

Unread messages: (3)

HeyNow1999	05/03/05 10:21:26	0 days
i used to be in a band, way back when. nothing recorded though. i think i can come up with something you like, maybe that will be my request for a video from you, you getting off while you listening to it, lol. is your mailing address on here?		
GishMan	05/03/05 09:12:49	0 days
Hi Sammy Yes, I am still willing to help. See you at the show. Kisses xoxoxoxo Gishman		
cRAIGSTER	05/03/05 09:40:55	0 days
SAMMY, you look good,mmmm. ready for your show. Think about me when you are cummin, wink. xoxox cRAIG		

There will be shown as many messages per page as set in your local settings ›› messenger section (messages on page item).

Make default welcome message for all new members

You can create a default welcome/greeting message to all new members. That message will be shown to them as soon as they log inside. You can set one in your local settings ›› messenger section:

Section «Messenger»:			
New member greeting	Welcome to our site! Feel free to ask any questions.	?	DEFAULT
Admin name (From:)	Webmaster	?	DEFAULT
Messages on page	20	?	DEFAULT
	Save changes		

You can also change admin name (which is shown in "From:" field).

New messages in a new window / show banner or text "you've got a message" to users

In templates you can set new messages to be opened in a new window, or you may want to show a banner to them, like this:

That is very effective for single-model sites to bring more attention to the personalized approach to members.

By default, a message like this is shown:

"You have 3 unread messages. Open messenger ››"

Send broadcast messages to all users

To send a broadcast message to all your members, all you need is simply enter the users menu in your admin panel. On the bottom of the users list you will find the broadcast message box:

sophocha	OFFLINE	15-Feb-05 / 05-Mar-05 (18)	65	English(British)	OPEN MESSENGER	0 / 3	0
synful36	ONLINE	20-Nov-04 / 06-Mar-05 (106)	111	English(United States)	OPEN MESSENGER	1 / 6	0
tresyn_t6ZDb	OFFLINE	10-Feb-05 / 10-Feb-05 (0)	0	English(United States)	OPEN MESSENGER	0 / 3	0
urgent69	OFFLINE	21-Nov-04 / 05-Mar-05 (104)	1084	English(United States)	OPEN MESSENGER	0 / 6	0
vfreeze	OFFLINE	23-Feb-05 / 25-Feb-05 (2)	148	English(United States)	OPEN MESSENGER	0 / 1	0

Broadcast message:

Type in your briadcase message here

Send now!

Click "Send now!" button to deliver your message directly to their screens.

Managing niches

- Managing niches / predefined keywords
- Personal skin per each niche
- Edit keywords per categories / galleries via checkboxes
- Show niche-specific content to members
- Show niche-specific design template to members
- Show niche-specific updates, top voted + viewed, featured picture + movie
- Show niches as a list of links or as a dropdown menu

Managing niches / predefined keywords

To turn on the niche/predefined keywords mode, you should check the appropriate checkbox in the Local settings ›› Search menu:

Section «Search»:

Predefined niches mode (keep unchecked for free search)	☑	?	DEFAULT
Search exact words only	☐	?	DEFAULT
	Save changes		
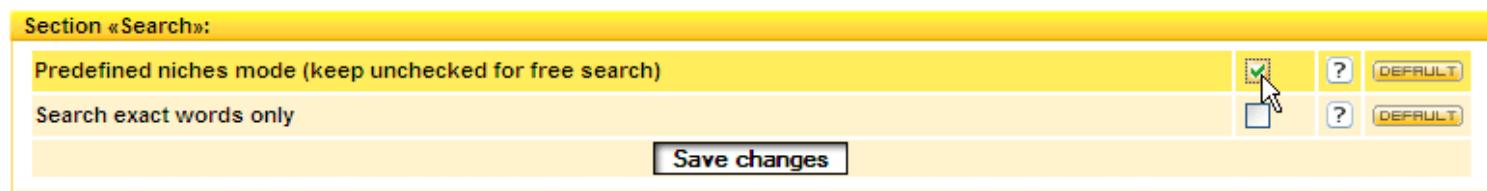

If you need to set up "Search exact words only", you can simply check this feature on. That would search exact words only. Otherwise the inclusions will be shown as well (ex.: you search for "Angel" and with this box checked, search results will NOT show "Angelina", otherwise it would – by default this box is deselected).

To manage predefined keywords and skins, simply click the "Search" top menu.

Personal skin per each niche

You can not just create pre-defined keywords list (niches), you can also select an individual design template which will be used per each niche. On the next page you can see a screenshot of a huge niches-based Paysite.

Keywords are shown by hits. The most popular keywords are shown on top of the list.

Keywords list:

Keyword	Skin	Actions	Hits
Amateurtjes	sexxxbios	Change keyword ✖	3102
Tieners	18p	Change keyword ✖	3055
Omas	rk	Change keyword ✖	1935
Lesbisch	ss	Change keyword ✖	1386
Fetish	fp	Change keyword ✖	1378
Aziatisch	th	Change keyword ✖	1193
Negerinnen	zk	Change keyword ✖	1175
Hardcore	kl	Change keyword ✖	1050
Shemale	vml	Change keyword ✖	1023
Dik	ds	Change keyword ✖	992
Cumshots	os	Change keyword ✖	713
SM	sm	Change keyword ✖	631
Anaal	anaal	Change keyword ✖	574
Blowjobs	sexxxbios	Change keyword ✖	499
D	sexxxbios	Change keyword ✖	464
Gay	hk	Change keyword ✖	460
Groepsex	sexxxbios	Change keyword ✖	405
Extreem	sexxxbios	Change keyword ✖	310
Arabisch	sexxxbios	Change keyword ✖	226
Bukkake	dvl	Change keyword ✖	226
Bondage	sexxxbios	Change keyword ✖	171
Interracial	sexxxbios	Change keyword ✖	168
Dildos	sexxxbios	Change keyword ✖	3
Fist Fuck	vr	Change keyword ✖	0
Grote Tieten	vk	Change keyword ✖	0
Onder Dwang	sexxxbios	Change keyword ✖	0
Plas Sex	zs	Change keyword ✖	0
Veel Haar	sexxxbios	Change keyword ✖	0
		Add new keyword	

Simply pick a design template using the drop-down menu next to each niche / keyword. Click "Change keyword" button to change the keyword, use "Add new keyword" to create new keyword / niche.

Edit keywords per categories / galleries via checkboxes

To edit keywords in the niches mode is the easiest thing compared to the standard editor. Have a look yourself:

Pre-defined keywords / niche mode

Standard editor (default):

Click "edit keywords" button to enter the keywords editor. Or click the "SEARCH" top menu button to do the same.

Show niche-specific content to members

Standard design template has support for the niches-based Paysites. Simply set the niches mode on in the configuration file there and it will do the job for you.

Show niche-specific design template to members

If you have niches mode in templates on, it will show niche-specific design template per each niche upon user's selection. You can keep the design template field blank if you do not want templates to be changed by selecting the niche.

Show niche-specific updates, top voted + viewed, featured picture + movie

With the niches mode on, all content will be shown based on your niches. Updates, top content (top voted, top viewed), featured picture, featured movie, pictures and movies sections – all that will be shown accordingly to the currently selected niche.

All you need to do is just go through your content and check the required keywords to sort your content by niches.

Show niches as a list of links or as a dropdown menu

You can publish the list of niches the way you want it. Simply pick the desired view method in template configuration file and it will show it for you.

Or you can change that manually by editing simple html template file. No programming skills required.

External links, FAQ, Polls, Banners

- Add external links to extra sites, online magazines, etc
- Add description, link, picture per external link
- Edit FAQ online
- Know what your members need with an interactive polls
- Add targeted banners to make more sales

Add external links to extra sites, online magazines, etc

You can easily add extra links by adding them in the links section. Categories:

Adding an item:

List of added items in category:

Add description, link, add picture per external link

You can add description, URL (link itself) and a picture per each link.
Here is how that looks:

Edit FAQ online

Edit FAQ right in your admin panel online. Place answers on frequently asked questions instantly.

Questions list:

Adding a FAQ item:

Know what your members need with an interactive polls

Know what your members want by simply asking them! Interactive polls could be a great tool for you. Simply add questions you want to have answers for, and give members a choice of answers to pick from (that would be easier to them). Members can also have their own opinion which is not listed. They can simply type it in the text area (if you want to allow them to).

Polls will be shown one-by-one. One members can vote on one poll just once.
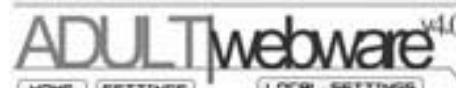

The "other" field" represents the free answer field. So a member could type in his personal answer to your poll question.

After adding new poll, you can type in your answer options:

Add targeted banners to make more sales

You can also add targeted banners to be shown in rotation in specific content categories or galleries. These banners could be also shown anywhere inside your members area.

Create a banners group:

Add a banner to the banners group:

Banners list:

Building models catalogue

- Models categories
- Models listing
- Model info
- Models search
- Models pictures and movies
- Models can add/change/update their information themselves

Models categories

To build a models catalogue, you should first define general categories.

Model categories:

Group		
Blondes	EDIT	✖
Brunettes	EDIT	✖
Red-hair	EDIT	✖
Busty	Add category	

If you want to have all models shown at one common catalogue, you should create a single category and place all models into it. Models will be shown in alphabetical order with A-B-C-..-Z links to each letter (default).

Models listing

Each category has its own models listing. You can add as many models per category as required. In each category, models will be shown in alphabetical order with A-B-C-..-Z links to each letter.

An example screenshot is shown on the next page.

	00--00	**Vikki**	Vikki	Age: 18	✖

AVV VIEW VIDEO   CONTACT SUPPORT   AdultWebware AVV

Click "add model" button to add an extra model.

Model info

You can edit model group, model date (schedule model to be added on an exact date), add model photo (click "browse" button to upload a photo from your hard drive), edit model keyword, edit up to 10 short info fields, and up to 2 wide info fields.

Short info fields could be used for bust size, foot size, hair color, height, weight and other model's stats options. Long fields could be used, for example, for personal "Bio", "Interests" and/or any other information which may require a long text.

Models search

In members area users are allowed to search the models database by name or pick a name from drop-down menu.

Models pictures and movies

To assign pictures and movies to models, you should go to your awpanel ›› galleries and use "assigned models" feature. Simply pick models using the select box. You can select multiple models per each gallery/category.

Models can add/change/update their information themselves

If you want your models to update their information by themselves, you can order an extra module (uploading movies, pictures, changing information, adding banners). Each model will have her personal login/password she can login with. New models can register instantly.

You can see new models in your admin panel and approve them. New content galleries also require your endorsement. Until approved, new models and their galleries are not available to members.

New model updates, new models are shown in "latest model updates" and "new models" section anywhere on your website (first page, for example).

All models are presented in default alphabetical models catalogue.

Admin panel screenshots

In this section some of the Admin Panel screenshots are shown.

Short notes

Access rights. Please do not forget to change access rights (WWW) to all newly uploaded content. You can change the rights to it easily via your FTP client or shell simply by that command: «chmod -R 777 content» (without quotes), where content is your content directory. Please let us know if you have any questions.

Video files. After uploading video files make sure that you have created screenshots with the same movie_file_name and .jpg extension per each video file (make sure it's in the same directory). After that - simply press "create thumbnails" button.

Enhanced skins support

- Changeable skins via admin area or via members area
- Your design could be integrated in 20 minutes
- Advanced templates language for power users
- Ready-made fast-to-use php files as an option
- You can also get pre-developed skins at a fraction of cost
- Just ANY paysite/avs/freesite/other could be integrated (open structure)

Changeable skins via admin area or via members area

You can change design templates in your Admin Panel ›› Local settings ›› Skins manually. Or, you can send your members directly to an URL like this:

Index.php?skin=yourskinname

Where yourskinname is your skin name which is uploaded and active in your adultwebware/templates/ directory (previewable in Admin Panel ›› Local settings ›› Skins)

Your design could be integrated in 20 minutes

You can integrate your design with AdultWebware for 20 minutes. Just follow the steps in the templates integration guide/tutorial which you can find in the tutorials section here:

http://www.adultwebware.com/go/tutorials/

Advanced templates language for power users

More than 60+ functions and 300+ variables are available for power users. There are no programming skills required to build power templates. All you need to know is an advanced html knowledge. And the will to create.

You can use ANY 3d-party PHP/other script/software with AdultWebware.

Ready-made fast-to-use php files as an option

You can find pre-developed ready-to go php files which you can use instead of using standard template structure (index.php with .tpl files).

You can also get pre-developed skins at a fraction of cost

Save HUGE with pre-developed professionally designed and already integrated design templates.

http://www.adultwebware.com/go/designs/

Just ANY paysite/avs/freesite/other could be integrated (open structure)

Open templates structure allows you use ANY 3d party script/software on ANY language. You can integrate it the way you want. You can use ANY php syntax. You can do whatever you want. PLUS, use built-in AdultWebware templates features and functions.

The AdultWebware has initially built for Paysite Automation. But you can also use it for any other task automation such as AVS/Free Sites or any other you may think of.

Our highly trained specialists would be more than happy to integrate AdultWebware with your design of any type. Please contact AdultWebware support at your personal V.I.P. area here:

http://vip.adultwebware.com/

Or use the following link:

http://www.adultwebware.com/go/integrate/
