

Managing all domains from one place

With your Multi-Domain (MD) suite, you can manage all your sites from one admin interface. On the first page you can see the list of domains which you have currently set up.

Clicking the domain name will open domain management mode for that domain. There you can remove/manage content items, set up content rotation, add news, manage users and much more (use all the Single Domain features per each domain).

You can edit keywords per each domain name and change its name if it was changed for some reason.

Domain's keywords actually are the list of niches featured in that domain. You can use that to automatically assign content from your content pool.

To enter content pool, simply click "Content galleries" button on the top middle of the page.

Domains list (Multi-Domain Admin Panel first page)

The screenshot shows the ADULTwebware v5.0 Multi-Domain Admin Panel. At the top, there are navigation links for HOME and SETTINGS, and a 'Content galleries' button. To the right, it says '» MULTI-DOMAIN EDITION' and 'CONTROL ALL YOUR SITES FROM ONE PLACE'. Below this, the 'Domains list' is displayed. On the left, there's a 'Main statistics' box showing 12 domains, 328 galleries, and 20936 content items. A yellow box below it says 'Automatic system update: You have the latest build already.' The main area is a table titled 'Domains' with columns for 'ID' and 'Domain'. Each domain row has an 'EDIT KEYWORDS' button and a 'EDIT' link. At the bottom right of the table is a 'Add domain' button.

ID	Domain	EDIT KEYWORDS	EDIT
1	hentaikeygt.com	EDIT KEYWORDS	EDIT
2	dragonkeygt.com	EDIT KEYWORDS	EDIT
3	anime-usa.com	EDIT KEYWORDS	EDIT
4	asianuncut.com	EDIT KEYWORDS	EDIT
5	clubhentai.com	EDIT KEYWORDS	EDIT
7	hentaimatrix.com	EDIT KEYWORDS	EDIT
8	jcute.com	EDIT KEYWORDS	EDIT
9	koreapornstar.com	EDIT KEYWORDS	EDIT
10	rareanime.com	EDIT KEYWORDS	EDIT
11	shogunx.com	EDIT KEYWORDS	EDIT
12	thailite.com	EDIT KEYWORDS	EDIT
13	toonshock.com	EDIT KEYWORDS	EDIT

Manual content assignment

To manually assign galleries and categories to each of your domains, you should enter the main content pool:

ADULTwebware v5.0 **MULTI-DOMAIN EDITION**
CONTROL ALL YOUR SITES FROM ONE PLACE

Domains list >> Content pool Full REGISTERED version

Content tree: GLOBAL CHANGES UPDATE

- Root
- asian** (14563)
- hentai** (6373)

Current statistics:

Total galleries	328
Total content items	20936

Short notes

Access rights. Please do not forget to change access rights (WWW) to all newly uploaded content. You can change the rights to it easily via your FTP client or shell simply by that command: `chmod -R 777 content` (without quotes), where content is your content directory. Please let us know if you have any questions.

Video files. After uploading video files make sure that you have created screenshots with the same `movie_file_name` and `.jpg` extension per each video file (make sure it's in the same directory). After that - simply press "create thumbnails" button.

Content galleries

MAIN (20936)

Assign this gallery to domain.

Domain	hentaikeygt.com
<input style="width: 100%;" type="button" value="Assign selected galleries."/>	

Assign galleries to domain by keywords.

Domain	hentaikeygt.com
<input style="width: 100%;" type="button" value="Assign galleries."/>	

Thumbnails creation using GD 2.x.

Standard thumbnail size	100x100	Thumbnail sizes	Standard
Additional content sizes			
Overwrite existing thumbnails	<input type="checkbox"/>	Create for	All
<input style="width: 100%;" type="button" value="Create thumbnails!"/>		Special effect	<input style="width: 100%;" type="button" value="Fetch"/>
<input style="width: 100%;" type="button" value="Create thumbnails!"/>		<input style="width: 100%;" type="button" value="Delete"/>	

* please note: this process may take a while
** for thumbnails deletion and fetching, «overwrite» checkbox must be checked

Watermark adding using GD 2.x.

Stamp file	<input style="width: 100%;" type="button" value="Browse..."/>		
X Position	Left	Y Position	Top
Make backup	<input type="checkbox"/>	Overwrite if already stamped	<input type="checkbox"/>
<input style="width: 100%;" type="button" value="Stamp!"/>		<input style="width: 100%;" type="button" value="Restore backup!"/>	

Advice: add watermarks only when thumbnails are created already

*please note: this process may take a while
** for backup restoring, overwrite checkbox must be toggled on

You can have just any content structure there you may want to have.

You can assign galleries by checking the checkboxes on the left, selecting a domain name you want to add content to, and clicking "assign selected galleries" button.

You can add content to just one domain name at once. One gallery could be added to more than one domain name.

Checkboxes on the left are shown per currently viewed level. The level selected by default is Root, so you can see checkboxes per each of subcategories for that level:

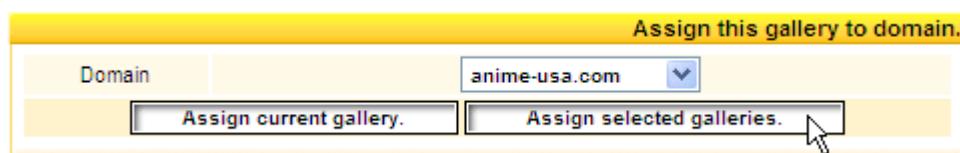

If you would pick any other category, it will show its subgalleries and subcategories. That is very useful with content of a good structure. In the example below hentai -> comics category is shown.

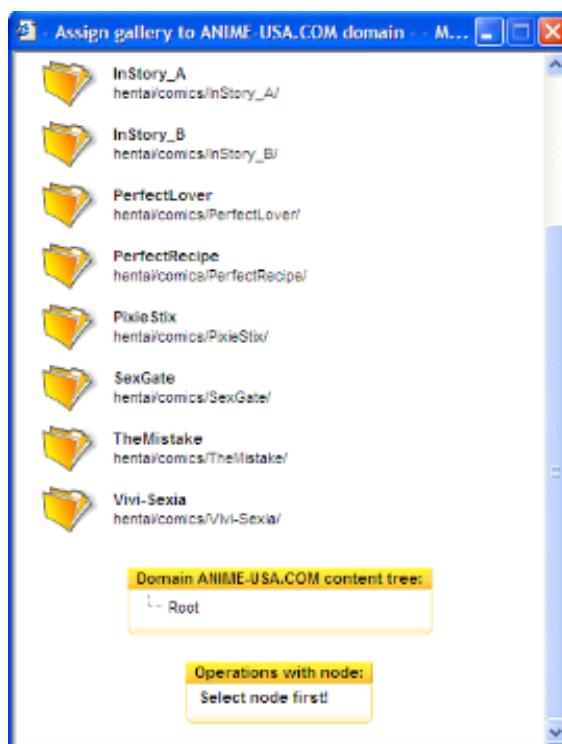

The screenshot shows the 'Content pool' interface. At the top, there are buttons for 'Domains list', 'Content pool', 'Full REGISTE', and 'Edit'. Below this, the 'Content tree' is shown with the 'Root' node expanded. The 'hentai' category is selected, and its subcategories are listed: 'comics (318)', 'FairGame (46)', 'GerosLab (30)', 'GoingPublic (11)', 'InStory_A (96)', 'InStory_B (85)', 'PerfectLover (4)', 'PerfectRecipe (16)', 'PixieStix (5)', 'SexGate (13)', 'TheMistake (4)', 'Vivi-Sexia (8)', 'original (1481)', 'pictures (4550)', and 'video (24)'. To the right of the tree, there is a form for assigning a gallery. The 'Domain' section shows 'comics (318)' with the URL 'hentai/comics/'. The 'Gallery' section contains fields for 'Name' (set to 'comics'), 'Description' (empty), 'Thumbnail' (set to '5986'), and 'Category Keywords' (with a link to 'Edit Keywords').

Simply pick the galleries/categories you want to be added and to what domain. In our example the domain name is anime-usa.com:

You can assign current category/gallery, or selected ones.

After clicking any of the buttons shown above, new window will be opened. To define target category to place selected galleries/categories at:

page 5 of 12

You can see the list of selected galleries/categories there and target node operations. If nothing selected, it will say "Select the node first".

The screenshot shows a content tree for the domain ANIME-USA.COM. At the top, there are two folder icons with their respective paths: 'TheMistake' (hentai/comics/TheMistake/) and 'Vivi-Sexia' (hentai/comics/Vivi-Sexia/). Below the tree, a yellow box contains the text 'Domain ANIME-USA.COM content tree:' followed by a list with 'Root'. A separate yellow box below it says 'Operations with node:' and 'Select node first!'. A cursor is visible over the 'Root' node in the tree.

To select a node, simply click it on the content tree. If there are no general categories created there, the tree will contain "Root" only. So you should click "Root" then to operate with root category.

The screenshot shows the content tree for the domain ANIME-USA.COM. The 'Root' node is highlighted with a yellow background and a cursor is pointing at it. The text 'Domain ANIME-USA.COM content tree:' is above the tree, and 'Root' is listed below it.

Once the category is selected, you can add listed galleries & categories to it, or create subcategory (a "child node"):

The screenshot shows the 'Operations with ROOT node' interface. It includes a 'Domain ANIME-USA.COM content tree:' header, a 'Root' node in the tree, and a yellow box containing the text 'Operations with ROOT node:' with two buttons: 'Assign gallery to this node.' and 'Add child to this node.' A cursor is over the 'Add child to this node.' button.

In our example, we will create pictures and movies "child nodes" for the Root category:

The screenshot shows the 'Operations with ROOT node' interface. It includes a 'Domain ANIME-USA.COM content tree:' header, a 'Root' node in the tree, and a yellow box containing the text 'Operations with ROOT node:' with two buttons: 'Assign gallery to this node.' and 'Add child to this node.' A category named 'pictures' is selected in a list below the buttons. The 'Add child to this node.' button is highlighted with a yellow background and a cursor is over it.

After adding "pictures" and "movies" categories, you will see them in your content tree:

Since we have a list of comics galleries, which we have picked from our content pool before, we may want to create a "comics" subcategory under "pictures" and place galleries there. To make so, we need to click "pictures" and add "comics" child to that node.

Domain ANIME-USA.COM content tree:

- Root
 - pictures (0)
 - movies (0)

Operations with PICTURES node:

- Assign gallery to this node.
- Delete this node.
- comics
- Add child to this node.

With any non-root categories node deletion is possible. You can delete unnecessary categories easily from within this small window. That does not delete content from content pool in any way. It just removes logical link to it from the domain you're are working with.

After creating the comics subcategory, simply click on it (a tooltip will be shown):

and hit "Assign gallery to this node" button:

Operations with COMICS node:

- Assign gallery to this node.
- Delete this node.
- Add child to this node.

That would add content from the list and the window will be closed automatically. If you go to domains list -> anime-usa.com -> galleries (the domain we were working with in the example above), we would see the content structure we have just created:

Content tree:

- Root
 - pictures (318)
 - comics (318)
 - FairGame (46)
 - GerosLab (30)
 - GoingPublic (11)
 - InStory_A (96)
 - InStory_B (85)
 - PerfectLover (4)
 - PerfectRecipe (16)
 - PixieStix (5)
 - SexGate (13)
 - TheMistake (4)
 - Vivi-Sexia (8)
 - movies (0)

The “pictures” and “movies” categories are marked gray because they are inactive (default date for new content items has been set). You can change the default date for new content per your domain in your “local settings” -> “galleries” -> “default date for new galleries”.

Content assignment by keywords

You can assign content to domains much faster and easier using keywords. To make so, you should define keywords per each domain from the first page. And define keywords to be used in the main content pool. To make so, simply go to your general content pool, click on any category or enter "global mode", and click "edit keywords" button.

Defining keywords keep in mind the way AW adds content to domains as described in an example below.

Example content pool content structure (keywords are shown in brackets):

Generating content structure in the targeted domain name, based on its keywords

→ Domain keywords: **pictures**
Resulting content structure:

→ Domain keywords: **asian**
Resulting content structure:

When you do update index for the main content pool, all domains will be updated automatically by keywords (if the checkbox "Global checkboxes keywords mode" is checked in your main settings -> main). And they will be updated exactly in the queue as described above – accordingly to the keywords and the content level.

So, if you want category "pictures" to be added to all of your domains, you should give it all keywords which are available.

Single upload – multiple updates

Once you have assigned your galleries and categories, you can upload content anytime to any of your galleries and categories directly to the content pool. That would generate automatic updates on all your MD Paysites accordingly to the content assignments.

You can upload galleries to categories and these galleries will be shown wherever that category is assigned to.

Simply click “update” button in your content pool after making an update.

Edit content at multiple domains

You can change descriptions, keywords, and any other fields simultaneously for multiple categories and select domain names you want the changes to be applied to.

That is as easy as using your Global Edit mode (go to your main content pool -> click “global changes” button). On the top box you can check the fields you want to edit.

Global operations.

<input checked="" type="checkbox"/> Adding Date	11 <input type="button" value="▼"/> May <input type="button" value="▼"/> 2005 <input type="button" value="▼"/> <input type="button" value="Calendar"/>	<input checked="" type="checkbox"/> Downloadable	Yes <input type="button" value="▼"/>
<input checked="" type="checkbox"/> Category Description	New description	<input type="checkbox"/> Category Description 2	
<input type="checkbox"/> Category Description 3		<input type="checkbox"/> Category Description 4	
<input type="checkbox"/> Category Description 5		<input type="checkbox"/> Category Keywords	<input type="button" value="EDIT KEYWORDS"/>
<input checked="" type="checkbox"/> Buy date	9 <input type="button" value="▼"/> Apr <input type="button" value="▼"/> 2005 <input type="button" value="▼"/> <input type="button" value="Calendar"/>	<input type="checkbox"/> Trial	For full users only <input type="button" value="▼"/>
<input type="checkbox"/> Producer		<input type="checkbox"/> Price	
<input style="background-color: #000080; color: white; font-weight: bold; padding: 2px 5px; border: none; border-bottom: 1px solid black;" type="button" value="dragonkeygt.com"/> <input style="background-color: #000080; color: white; font-weight: bold; padding: 2px 5px; border: none; border-bottom: 1px solid black;" type="button" value="anime-usa.com"/> <input style="background-color: #000080; color: white; font-weight: bold; padding: 2px 5px; border: none; border-bottom: 1px solid black;" type="button" value="asianuncut.com"/> <div style="text-align: right; margin-top: -10px;"> <input style="border: 1px solid black; padding: 2px 10px;" type="button" value="Save changes"/> </div>			

Below that box, you can see your full content tree completely opened.

Content tree:

STANDARD MODE

	1	2	3	4	>	Items	Producer	Buy date	Age	Price
